

- 项目背景
- [17] 运行环境与设备
- **模块设计与开发**
- 过4 技术难点

项目背景

冬奥会"皇冠上的明珠"

场地费用限制无法普及

安全性与趣味性

体验感与沉浸感

运行环境与设备

VR眼镜版

立体大屏版

设计理念

接近真实的运动体验

接近真实的运动体验

- 1 入门指南
- 012 动作演示
- 13 生动形象

新手教程

高度仿真的赛场设计

普通级高山滑雪场景总体图

高度仿真的赛场设计

运动员过旗门示意图

超越现实的赛事挑战

- 冒险挑战
- 112 魔幻色彩
- DB 虚实融合

大师级趣味滑雪场景总体图

超越现实的赛事挑战

翻滚的大转盘

移动的巨石阵

多种沉浸的呈现方式

运行环境示意图 (兼容两种硬件环境)

VR眼镜版

立体大屏版

Kinect人体检测算法设计与实现

人体骨骼框架检测

动作检测流程

人体骨骼框架数据分析与平滑处理

```
Joint joints[JointType_Count]; // 定义骨骼信息

n_body->GetJoints(JointType::JointType_Count, joints); // 获取骨骼信息节点

int elbow = JointType_ElbowRight;

int hand = JointType_HandRight;

int coutss = 0;
float curpos = joints[hand].Position.X;
float center = joints[elbow].Position.X; // 得到人手部和肘部的X坐标的位置 都是右手

float shoulderL = joints[JointType_ShoulderLeft].Position.Y;
float head = joints[JointType_Head].Position.Y;
float handRY = joints[JointType_HandRight].Position.Y;
float handR = joints[JointType_HandRight].Position.X;
float handR = joints[JointType_HandRight].Position.X;
float spine = joints[JointType_HandLeft].Position.X;
```

人体关节点示意图

骨骼框架检测代码

Unity与Kinect间Socket 通信

04

```
server_addr.sin_port = htons(9999);
while (true) {
   s_server = socket(AF_INET, SOCK_STREAM, 0);
   if (bind(s_server, (SOCKADDR*)&server_addr, sizeof(SOCKADDR)) == SOCKET ERROR) {
       cout << "套接字绑定失败! " << endl;
       WSACleanup();
   else {
       cout << "套接字绑定成功! " << endl;
   //设置套接字为监听状态
   if (listen(s_server, SOMAXCONN) < 0) {</pre>
       cout << "设置监听状态失败! " << endl;
       WSACleanup();
   else {
       cout << "设置监听状态成功! " << endl;
       break;
cout << "服务端正在监听连接,请稍候...." << endl;
//接受连接请求
len = sizeof(SOCKADDR);
s_accept = accept(s_server, (SOCKADDR*)&accept_addr, &len);
if (s_accept == SOCKET_ERROR) {
   cout << "连接失败! " << endl;
   WSACleanup();
   return 0;
```

```
//建立连接
private void connectServer()
    try
        socket = new Socket(AddressFamily.InterNetwork, SocketType.Stream, ProtocolType.Tcp);
        socket. Connect (IPAddress. Parse ("127. 0. 0. 1"), 9999);
       Debug. Log("服务器连接");
       receiveSit = new Thread(ReceiveSit):
       receiveSit.Start():
    catch (Exception ex)
       Debug. Log("服务器连接失败");
       Debug. Log (ex. Message);
private void ReceiveSit()
    while (true)
        if (socket. Connected == false)
           Debug. Log(("断开连接"));
            break;
```

曲面立体大屏设置立体视觉

立体大屏游玩效果

采用双相机模拟立体效果

(由于是偏振立体双画面,普通相机拍摄时会有重影)

滑雪运动员骨骼动画制作

人物骨骼模型

粒子特效制作

- III)粒子系统
- 112 生命周期
- 13 粒子爆炸

领奖台粒子效果预览图

雪地凹陷效果制作

雪地凹陷效果示意图
